POLYCASE COMPANY PROFILE

"Polycase manufactures and distributes a proprietary line of off-the-shelf enclosures and accessories for use across various industries. Unfortunately, due to the high volume of requests, we cannot respond to individual customer supplier surveys / new vendor forms. However, we are providing you a company profile that includes commonly requested information. We apologize for any inconvenience."

Company Information

Polycase, Inc. has been manufacturing products for the electrical/electronics industry since 1951. Our core production processes include plastic injection molding, precision CNC machining, and digital printing. The majority of our enclosures are made in the United States and shipped to customers worldwide. Our headquarters are located in a 40,000 square foot purpose-built manufacturing facility.

As a privately held company, Polycase does not disclose financial information including annual revenue, employee headcount, net income, and R&D expenditures.

QMS Statement - General Requirements

Polycase is a UL Certified Molder of plastic electronic enclosures, and follows Lean Manufacturing protocols to ensure efficiency and quality products for our customers. Though not certified, our Quality Management System is ISO 9001:2015 compliant. A Quality Manual and Quality Policy with objectives have been implemented along with controls for documents and records.

Management Responsibility

Management is committed to the QMS by evidence of its development and implementation of the system. The QMS representative along with top management conduct reviews to insure its continuing suitability, adequacy and effectiveness. Management is committed to communicating to the organization the importance of meeting customer, as well as, statutory and regulatory requirements.

Resource Management

Resources are provided to implement and maintain the QMS and continually improve its effectiveness, enhancing customer satisfaction by meeting customer requirements. Product conformity is maintained by a highly motivated work force with appropriate

education, training, skills and experience, along with proper work environment and a maintained infrastructure.

Product Realization

Quality plans are developed through customer communication, ensuring specific customer and product requirements are defined and achieved. Design and development of new products are reviewed, verified and validated at each design stage. Purchased product and processes are controlled by verification of the purchase order requirements and an approved vendor certification process. Polycase is a UL Certified Molder which insures material lot traceability for our in-house molding operations. A documented calibration system traceable to NIST ensures conformity.

Measurement, Analysis and Improvement

Analysis of data such as customer satisfaction, internal audits, and the monitoring of process and product, all establish the effectiveness of the QMS along with its continuous improvement. Products are identified by work order with process routers during the manufacturing process with documented controls for nonconforming product to prevent its unintended use or delivery. Documented corrective and preventative action procedures are used to prevent nonconformities to occur and drive procedural improvements. The effectiveness of the corrective actions are monitored and reviewed by top management.

As a privately held company, Polycase does not disclose total number of employees. However, listed below are the key contacts for our company:
